

MANAGED SHAREPOINT 2007

SIMPLE DOCUMENT SHARING AND BACKUP SERVICE FOR YOUR BUSINESS

WHAT IS MANAGED SHAREPOINT?

As a hosted version of Microsoft® Windows SharePoint Services Version 3, Managed SharePoint 2007 is the ultimate collaboration tool for any type of team that needs to work together more efficiently, but does not have the resources or web development skills to create a sophisticated, secure online portal site themselves.

With a Managed SharePoint site, team members can work together on documents, tasks, contacts, events, surveys and other information in one central online location. This makes Managed SharePoint 2007 particularly suited to teams with members in geographically diverse locations, as well as teams comprising people from different organisations and offices.

WITH MANAGED SHAREPOINT 2007, YOU CAN:

- Centrally store & share documents
- Easily view and edit documents
- Access your documents from multiple locations
- Have your documents & data backed up

TOP FOUR BENEFITS OF USING MANAGED SHAREPOINT 2007 IN YOUR BUSINESS

When your company is growing and your IT tools are not supporting daily operations anymore it can be overwhelming to find new ways to improve your work environment. Use WebCentral's Managed SharePoint to help reorganise your business. The new *Application Templates* are out-of-the-box custom scenarios that can immediately streamline internal and external processes. Below, you will find four reasons why SharePoint can help your business function more effectively.

1. Improve team productivity with easy-to-use collaborative tools

Connect people with the information and resources they need. Users can create team workspaces, coordinate calendars, organise documents and receive important notifications and updates through communication features including announcements and alerts, as well as the new templates for creating blogs and wikis. Mobile users can take advantage of convenient offline synchronisation capabilities.

2. Reduce the complexity of securing business information

Managed SharePoint 2007 provides IT with advanced administrative controls for increasing

the security of information resources, while decreasing cost and complexity associated with site provisioning, site management and support. Take advantage of better controls for site life-cycle management, site memberships and permissions and storage limits.

3. Get users up to speed quickly

User interface improvements in Managed SharePoint 2007 include enhanced views and menus that simplify navigation within and among SharePoint sites. Integration with familiar productivity tools, including programs in the Microsoft Office family, make it easy for users to get up to speed quickly. For example, users can create workspaces, post and edit documents and view and update calendars on SharePoint sites, all while working within Microsoft Office system files and programs.

4. Take file sharing to a new level with robust storage & backup capabilities

Managed SharePoint 2007 supplies workspaces with document storage and retrieval features, including check-in/check-out functionality, version history, custom metadata and customisable views. New features include enhanced recycle bin functionality for easier recovery of content and improved backup and restoration.
